## **DETAILED ACTION**

### ***Amendment***

1. Acknowledgement is made of amendment filed on 07/11/2008.
2. Claims 1,3-4,7-13,15, and 17 are still pending in the application. Claims 2,5-6,14, and 16 are cancelled.

### ***Allowable Subject Matter***

3. The following is an examiner's statement of reasons for allowance:
4. Claims 1,3-4,7-13,15, and 17 are allowed.
5. Claim 1 recites, inter alia, a method for charging an electrical storage device so as to extend the life thereof, the method comprising the steps of:  
  
developing an essentialized cell model structure of the electrical storage device utilizing a hybrid cell model approach; determining model parameters for charge-discharge data of said structure; and determining charge-discharge behavior of said structure in a voltage-charge plane;  
  
measuring voltage values of the structure based upon the charge discharge behavior;  
  
and deriving an instantaneous damage rate from the measured voltage values, wherein the method achieves real time observation of the charge state of the electrical storage device.
6. Claim 4 recites, inter alia, an optimal re-charging controller for an electrical storage device, comprising: a simulation processor receiving an input signal sent to the electrical storage device and a measured output signal generated by the electrical storage device, wherein said simulation processor models a plurality of states of the

Art Unit: 2838

electrical storage device and generates an estimated output signal so that the controller mitigates damage to the electrical storage device, wherein said processor comprises: a feedback component which receives said measured output signal and said estimated output signal to generate a correction signal;

an observer component which receives said correction signal and said input signal to generate said estimated output signal and an estimated internal state signal, wherein the estimated output signal converges a plurality of modeled dynamic states to corresponding states of the electrical storage device, and wherein the correction signal represents a real-time estimate of the amount of damage being done to the electrical storage device during re-charging, such that the controller achieves real time observation of the charge state of the electrical device.

7. The art of record does not disclose the above limitations, nor would it be obvious to modify the art of record to include either of the above limitations.

8. Claims 3-4,7-13,15, and 17 are also allowed based on their dependency on claims 1 and 4.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Art Unit: 2838

10. Fenkanyan et al., (Fenkanyan) US PAT 6,015,296 discloses an apparatus for generating non linear dynamic chaotic motion.
